

EDUCATION

Southeastern Louisiana University

*Hammond, LA***B.S. IN COMPUTER SCIENCE** | Major GPA: 3.9*Aug. 2023 - May 2026*

- Relevant Coursework: Software Engineering, Artificial Intelligence, Java Algorithms 1 & 2, Data Structures, Assembly & Computer Organization, Game Programming
- **Extracurricular:** D1 Full Scholarship Track & Field Athlete
- **Achievements:** 2023 NAIA All-American, Hammer Throw | 2023 NAIA Academic All-American | SLC Conference 2nd Place | Rank 8 NCAA National List 2026

WORK EXPERIENCE

Envoc

*Baton Rouge, LA***ASSOCIATE SOFTWARE DEVELOPER INTERN***Jan. 2026 - May 2026*

- Solely designed and developed a production Wallet Pass Generation microservice supporting Apple, Google, and Samsung Wallet via a unified payload interface
- Collaborated with a team to design and build the full frontend and backend of an admin portal
- Gained hands-on experience with professional software workflows including pull requests, code reviews, Domain-Driven Design, CQRS patterns and more

PlayScape (Startup)

*Nashville, TN (Remote)***GAME DEVELOPER***Jan. 2025 - May 2025*

- Sole developer on 3 mobile game prototypes — responsible for the full stack from gameplay mechanics and UI systems to build delivery in Unity and C#
- Presented prototypes directly to investors alongside the CEO; contributed across the entire product lifecycle from initial concept to demoed build

Tobit AG

*Ahaus, Germany***FULL STACK DEVELOPER INTERN***Dec. 2023*

- Rebuilt a full-stack news platform iteratively across three stacks (vanilla HTML/CSS, then JS, then React) to understand the capabilities and tradeoffs of each
- Implemented UI from design specifications against an existing REST API

PROJECTS

Wallet Pass Generator | .NET, C#, Azure Functions, Docker

Jan. 2026 - Mar. 2026

- Architected a unified payload schema that abstracts the structural differences between Apple, Google, and Samsung Wallet pass formats into a single input interface
- Implemented full pass generation and signing pipelines for all three platforms using Azure Functions
- Sole engineer on the project — independently researched, designed, and delivered the entire microservice architecture from schema design to containerized deployment

IMASS Wolke (Capstone Project for ARA) | React, .NET, C#, Docker, Fortran

Sep. 2025 - Dec. 2025

- Led a group of 4 in developing a cloud platform for ARA that containerizes legacy Fortran scientific models (e.g. SNTHERM) and exposes them via a web interface — eliminating manual environment setup for researchers entirely
- Engineered a schema-based workflow builder allowing scientists to chain model inputs and outputs into visual pipelines, enabling complex multi-model simulations without writing code
- Reverse-engineered and integrated 1980s-era Fortran codebases to understand I/O contracts and expose them as clean, modern REST-accessible services via Docker
- Project was presented to the U.S. Congress by ARA, contributing to the securing of \$1.2M in federal funding

Ascend | React Native, Expo, C#, SQL, Supabase

Aug. 2025 - Present

- Built a cross-platform mobile app in React Native with a real-time Supabase backend, integrating auth, live data sync, and a custom XP and leveling system across multiple life categories
- Architected full backend with Supabase; app running end-to-end on test devices with active pre-launch beta test
- Implemented AI workflows that automatically rate people's activities and generate daily and weekly tasks using OpenAI API, Supabase edge functions, and GitHub Actions

Wolf of AI Street | Python, PyTorch, LSTM, GDELT, Pandas

Fall 2025

- Engineered a custom dataset combining 5 years of hourly EUR/USD OHLC data with GDELT-sourced news sentiment, applying a custom relevance scoring pipeline to filter and weight articles by EUR/USD significance across 33k aligned time-series rows
- Trained an LSTM across three iterative architectures, directional prediction, confidence-gated signal filtering, and a position-sizing trading bot, each redesigned based on results of the prior version

Personal Website | React, Next.js, TypeScript, Tailwind, Framer Motion, Three.js

Nov. 2025

- Designed and built a visually focused personal portfolio featuring 3D elements, smooth animations, and a clean UX

SKILLS

PROGRAMMING LANGUAGES: C#, Java, Python, C, C++, TypeScript, JavaScript, SQL, Fortran

FRAMEWORKS & TOOLS: .NET, React, React Native, Next.js, Expo, Azure, Azure Functions, Docker, Supabase, PostgreSQL, Git, Unity, PyTorch, Tailwind, Figma, Linux, REST APIs, CI/CD

SPOKEN LANGUAGES: German (native), English (bilingual)
